## Environmental Safety Instruction

- Avoid the dusty, humidity and temperature extremes. Do not place the product in any area where it may become wet.
- 0 to 60 centigrade is the suitable temperature. (The figure comes from the request of the main chipset)
- Generally speaking, dramatic changes in temperature may lead to contact malfunction and crackles due to constant thermal expansion and contraction from the welding spots' that connect components and PCB. Computer should go through an adaptive phase before it boots when it is moved from a cold environment to a warmer one to avoid condensation phenomenon. These water drops attached on PCB or the surface of the components can bring about phenomena as minor as computer instability resulted from corrosion and oxidation from components and PCB or as major as short circuit that can burn the components. Suggest starting the computer until the temperature goes up.
- The increasing temperature of the capacitor may decrease the life of computer. Using the close case may decrease the life of other device because the higher temperature in the inner of the case.
- Attention to the heat sink when you over-clocking. The higher temperature may decrease the life of the device and burned the capacitor.

## **Introduction of the Motherboard**

### **1-1 Feature of Motherboard**

- Onboard Intel® Skylake-U/Kabylake-U series processor, TDP 15 W, never denies high performance
- Support 2\* DDR-4 2133 MHz SO-DIMM, maximum capacity up to 8GB
- Integrated HD Audio CODEC
- Support 2\*Realtek Gigabit LAN
- Support triple displays ( HDMI, VGA, LVDS or eDP)
- Support 1 \* external RS232/422/485 and 9 \* internal RS232
- Support 4 \* external USB 3.0 & 5 \* Internal USB1.1/2.0
- Support 1\* RJ-11 & PS/2 connector
- Support 1\* Mini-PCIe/mSATA slot & 1 \* Mini-PCIe slot
- Support 1\* PCI-E x1 expansion slot
- Compliance with ErP standard
- Support Watchdog function

## **2-2 Connectors and Headers**

### **2-2-1 Connectors**

#### **(1) Rear I/O Connectors**

Icon	Name	Function
	<b>DC 12V Power-out Connector</b>	For user to connect compatible power adapter to provide power supply out.
	<b>VGA Port</b>	To connect display device that support VGA specification.
	<b>Parallel Port</b>	Also called LPT connector. Mostly for user to connect printer or scanner with parallel interface.
	<b>RJ-11 Port</b>	RJ-11 for cash drawer I/F by GPIO control.
	<b>PS/2 Keyboard &amp; Mouse Connector</b>	This combo port is for user to connect PS/2 mouse or keyboard device to the board.
	<b>HDMI Port</b>	To connect display device that support HDMI specification.
	<b>Serial Port</b>	Mainly for user to connect external MODEM or other devices that supports Serial Communications Interface.
	<b>USB 3.0 Port</b>	To connect USB keyboard, mouse or other devices compatible with USB specification. USB 3.0 ports supports up to 5Gbps data transfer rate.
	<b>RJ-45 LAN Port</b>	This connector is standard RJ-45 LAN jack for Network connection.
	<b>Line-Out Connector</b>	For user to connect external speaker, earphones, etc to transfer system audio output.

---

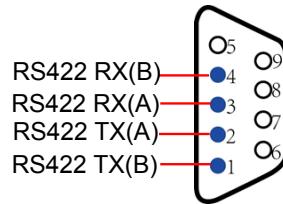

---

	<b>MIC Connector</b>	For user to connect microphone.
---	----------------------	---------------------------------

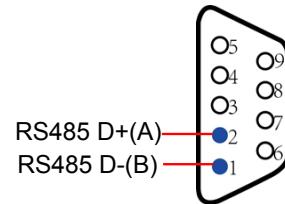

## (2) COM1 (9-pin Block): RS232/422/485 Port

COM1 port can function as RS232/422/485 port. In normal settings COM1 functions as RS232 port. With compatible COM cable COM1 can function as RS422 or RS 485 port.

User also needs to go to BIOS to set '**Transmission Mode Select**' for COM1 (*refer to Page 30*) at first, before using specialized cable to connect different pins of this port.

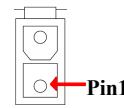

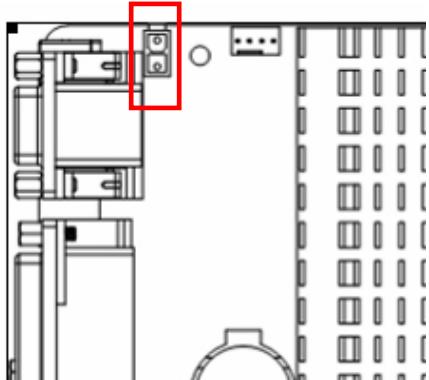

For RS422 Mode

For RS485 Mode

## (3) ATXPWR(2-pin Block): Internal 12V DC-in Power Connector

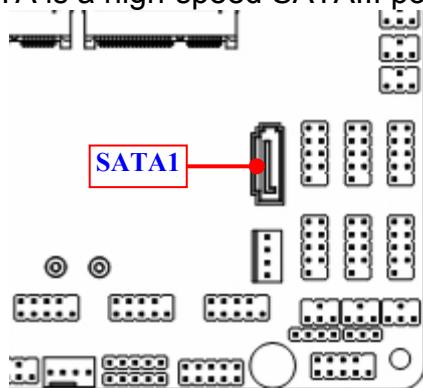

Pin.	Definition
2	+12V DC_IN
1	GND

**Warning!!** The board has a 12V DC-in power connector (DC\_IN) in I/O back panel and an internal ATX12V (ATXPWR) power connector. User can only connect one type of compatible power supply to one of them to power the system.

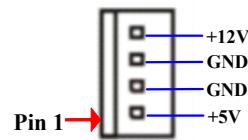

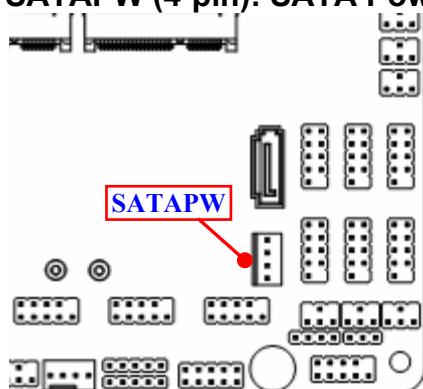

#### (4) SATA (7-pin Block): SATAIII Port connector

SATA is a high-speed SATAIII port that supports 6GB/s transfer rate.

Pin No.	Definition
1	GND
2	TXP
3	TXN
4	GND
5	RXN
6	RXP

# Chapter 3

## Introducing BIOS

**Notice!** The BIOS options in this manual are for reference only. Different configurations may lead to difference in BIOS screen and BIOS screens in manuals are usually the first BIOS version when the board is released and may be different from your purchased motherboard. Users are welcome to download the latest BIOS version form our official website.

The BIOS is a program located on a Flash Memory on the motherboard. This program is a bridge between motherboard and operating system. When you start the computer, the BIOS program will gain control. The BIOS first operates an auto-diagnostic test called POST (power on self test) for all the necessary hardware, it detects the entire hardware device and configures the parameters of the hardware synchronization. Only when these tasks are completed done it gives up control of the computer to operating system (OS). Since the BIOS is the only channel for hardware and software to communicate, it is the key factor for system stability, and in ensuring that your system performance as its best.

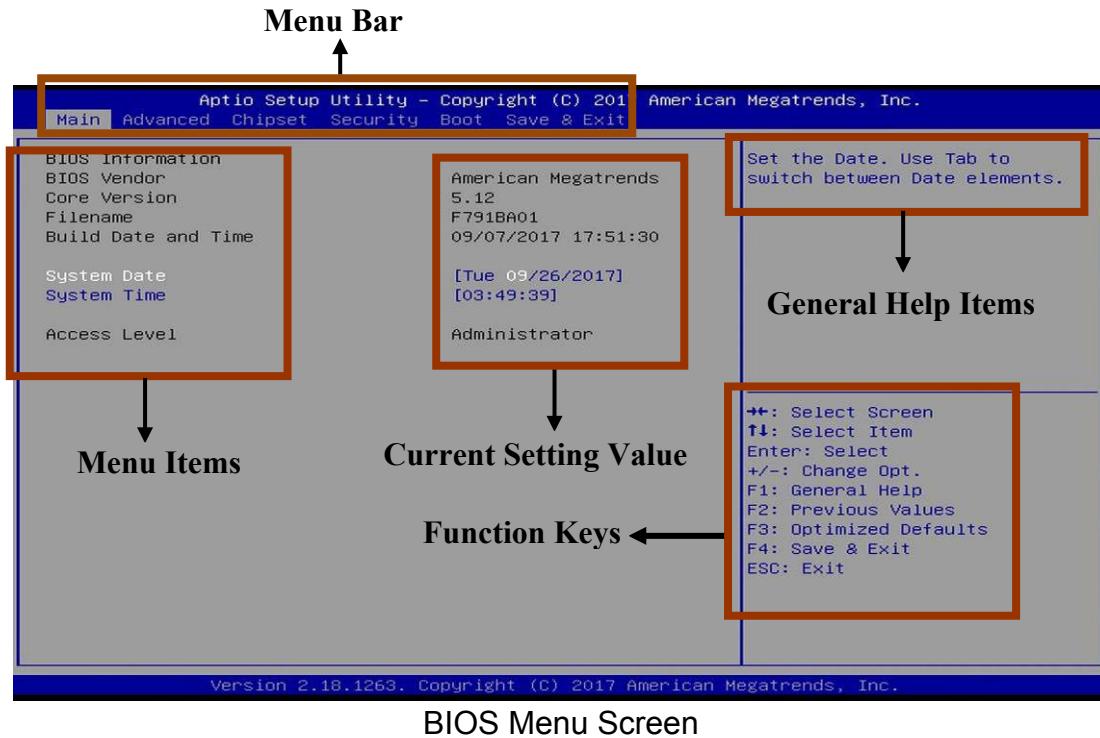

### 3-1 Entering Setup

Power on the computer and by pressing <Del> immediately allows you to enter Setup. If the message disappears before your respond and you still wish to enter Setup, restart the system to try again by turning it OFF then ON or pressing the “RESET” button on the system case. You may also restart by simultaneously pressing <Ctrl>, <Alt> and <Delete> keys. If you do not press the keys at the correct time and the system does not boot, an error message will be displayed and you will again be asked to

Press    <Del> to enter Setup; press < F7> for Pop Menu.

## 3-2 BIOS Menu Screen

The following diagram show a general BIOS menu screen:

BIOS Menu Screen

## 3-3 Function Keys

In the above BIOS Setup main menu of, you can see several options. We will explain these options step by step in the following pages of this chapter, but let us first see a short description of the function keys you may use here:

- Press ←→ (left, right) to select screen;
- Press ↑↓ (up, down) to choose, in the main menu, the option you want to confirm or to modify.

- 
- 
- Press <Enter> to select.
  - Press <+>/<-> keys when you want to modify the BIOS parameters for the active option.
  - **[F1]:** General help.
  - **[F2]:** Previous value.
  - **[F3]:** Optimized defaults.
  - **[F4]:** Save & Exit.
  - Press <Esc> to exit from the BIOS Setup.

## 3-4 Getting Help

### Main Menu

The on-line description of the highlighted setup function is displayed at the top right corner the screen.

### Status Page Setup Menu/Option Page Setup Menu

Press **[F1]** to pop up a small help window that describes the appropriate keys to use and the possible selections for the highlighted item. To exit the Help Window, press <Esc>.

## 3-5 Menu Bars

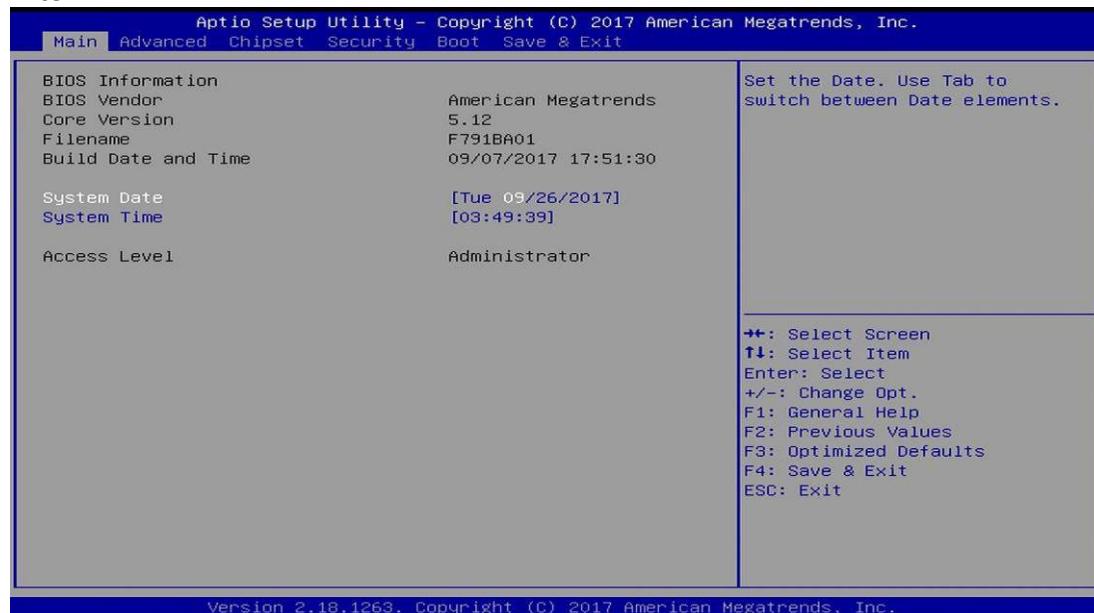

There are six menu bars on top of BIOS screen:

<b>Main</b>	To change system basic configuration
<b>Advanced</b>	To change system advanced configuration
<b>Chipset</b>	To change chipset configuration
<b>Security</b>	Password settings
<b>Boot</b>	To change boot settings
<b>Save &amp; Exit</b>	Save setting, loading and exit options.

User can press the right or left arrow key on the keyboard to switch from menu bar. The selected one is highlighted.

## 3-6 Main Menu

Main menu screen includes some basic system information. Highlight the item and then use the <+> or <-> and numerical keyboard keys to select the value you want in each item.

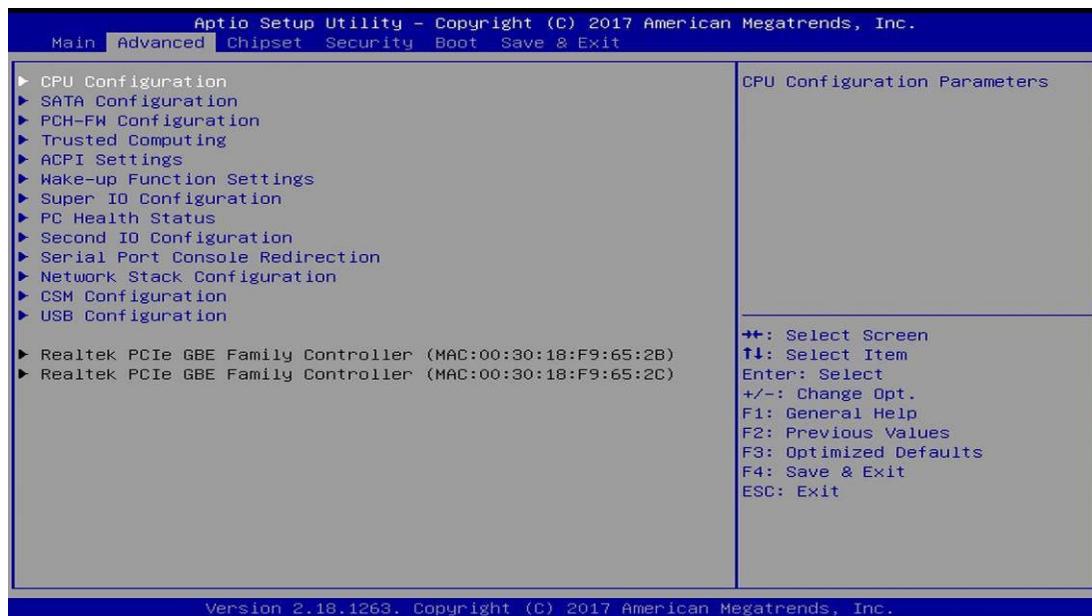

### System Date

Set the date. Please use [Tab] to switch between data elements.

### System Time

Set the time. Please use [Tab] to switch between time elements.

## 3-7 Advanced Menu

### ▶ CPU Configuration

Press [Enter] to view current CPU configuration and make settings for the following sub-items:

#### **Intel Virtualization Technology**

The optional settings: [Disabled]; [Enabled].

When enabled, a VMM can utilize the additional hardware capabilities provided by Vanderpool Technology.

#### **Hardware Prefetcher**

The optional settings are: [Disabled]; [Enabled].

Use this item to enable the Mid Level Cache (L2) streamer prefetcher.

#### **Adjacent Cache Line Prefetch**

The optional settings are: [Disabled]; [Enabled].

Use this item to enable Mid Level Cache (L2) prefetching of adjacent cache lines.

---

---

### **Intel(R) SpeedStep(tm)**

Use this item to enable or disable Intel SpeedStep. When set as [Enabled], it allows more than two frequency ranges to be supported.

The optional settings: [Disabled]; [Enabled].

### **CPU C States**

Use this item to enable or disable CPU Power Management. When set as [Enabled], it allows CPU to go to C states when it's not 100% utilized.

The optional settings: [Disabled]; [Enabled].

### **Package C State Limit**

Use this item to select maximum package C State Limit setting.

The optional settings: [C0/C1]; [C2]; [C3]; [C6]; [C7]; [C7S]; [C8]; [C9]; [C10]; [Cpu Default]; [Auto].

▶ **SATA Configuration**

Press [Enter] to make settings for the following sub-items:

#### **SATA Controller(s)**

The optional settings are: [Enabled]; [Disabled].

*When set as [Enabled], the following items shall appear:*

#### **SATA Mode Selection**

This item determines how SATA controller(s) operate.

The default setting is: [AHCI].

#### **mSATA**

##### **Port**

The optional settings are: [Enabled]; [Disabled].

#### **SATA**

##### **Port**

The optional settings are: [Enabled]; [Disabled].

##### **Hot Plug**

The optional settings are: [Enabled]; [Disabled].

▶ **PCH-FW Configuration**

Press [Enter] to view ME information and make settings in the following sub-items:

---

---

## **TPM Device Selection**

Use this item to select TPM device.

The optional settings are: [dTTPM]; [PTT].

▶ **Firmware Update Configuration**

Press [Enter] to make settings for '**ME FW Image RE-Flash**'.

▶ **ME FW Image Re-Flash**

Use this item to enable or disable ME FW Image Re-Flash function.

The optional settings: [Disabled]; [Enabled].

*\* In the case that user needs to update ME firmware, user should set '**ME FW Image Re-Flash**' as [**Enabled**], save the settings and exit. The system will turn off and reboot after 4 seconds. If the user goes to BIOS screen again will find this item is set again as [**Disabled**], but user can still re-flash to update firmware next time.*

▶ **Trusted Computing**

Press [Enter] to enable or disable '**Security Device Support**'.

**Security Device Support**

Use this item to enable or disable BIOS support for security device.

The optional settings: [Disabled]; [Enabled].

▶ **ACPI Settings**

Press [Enter] to make settings for the following sub-item:

**ACPI Sleep State**

Use this item to select the highest ACPI sleep state the system will enter when the suspend button is pressed.

The optional settings are: [Suspend Disabled]; [S3 (Suspend to RAM)].

▶ **Wake-up Function Settings**

Press [Enter] to make settings for the following sub-items:

**Wake-up System with Fixed Time**

Use this item to enable or disable system wake on alarm event.

The optional settings: [Disabled]; [Enabled].

When set as [Enabled], system will wake on the hour/min/sec specified.

**Wake-up System with Dynamic Time**

---

---

---

Use this item to enable or disable system wake on alarm event.

System will wake on the current time + Increase minutes.

The optional settings: [Disabled]; [Enabled].

When set as [Enabled], system will wake on the current time + increased minute(s).

### **PS2 KB/MS Wake-up**

The optional settings: [Enabled]; [Disabled].

Use this item to enable or disable PS2 KB/MS wake-up from S3/S4/S5.

\* *Note: This function is supported when 'ERP Support' is set as [Disabled].*

### **USB S3/S4 Wake-up**

Use this item to enable or disable USB S3/S4 wakeup. This function is only supported when ERP function is disabled.

\* *Note: This function is supported when 'ERP Support' is set as [Disabled].*

### **USB S5 Power**

Use this item to enable or disable USB power after power shutdown.

\* *This function is supported when 'ERP Support' is set as [Disabled].*

## ► **Super I/O Configuration**

Press [Enter] to make settings for the following sub-items:

### **Super IO Configuration**

#### **ERP Support**

The optional settings: [Disabled]; [Auto].

This item should be set as [Disabled] if you wish to have all active wake-up functions.

## ► **Serial Port 1 Configuration**

Press [Enter] to make settings for the following items:

### **Serial Port**

Use this item to enable or disable serial port (COM).

### **Change Settings**
